TEXTILE PRODUCTION

*Be unique — write your own story.*

# Hello! how are you?

Hello! I'm Javier, representing the team at thePROJECT. We'd like to warmly welcome you to our portfolio, allowing you to get to know us better and dive into the fascinating world of textile manufacturing.

It's crucial to understand that in the textile industry, everything is possible, yet certain conditions are necessary to achieve it. Textile manufacturing operates on the principle of economies of scale; meaning, the more you produce, the lower the cost per product.

Without further ado, let's explore all our manufacturing services together and address any questions that may arise in the development process of your project.

# How to work with us?

## What can we manufacture?

We offer a wide range of fully customizable textile products tailored to your specific needs. Our available items include t-shirts, polos, sweatshirts, shorts, pants, shirts, sweaters, sportswear, swimwear, and caps, among others.

Our minimum manufacturing order is 200 units per model and color, providing flexibility to distribute these units across sizes that best meet your requirements. This minimum is crucial as we produce each item from scratch, adhering to textile industry standards. Please note that some items, such as underwear or socks, may have higher minimum production requirements.

## How do we do it?

In our company, we specialize in creating fully customized textile products tailored to each client's specific requirements. Unlike many suppliers, we don't limit customization to a set catalog of predefined models. Our clients have the freedom to personalize every garment detail, including fabric choice, color, size, tags, and decorations, as long as it aligns with industry capabilities and meets minimum production requirements.

The initial steps of the manufacturing process require clients to clearly understand their production goals to provide an accurate and fair quote. While we can agree on technical procedures and details, discrepancies in pricing can be a barrier to progress. Therefore, we stress the importance of clearly defining requirements and objectives to ensure we offer the best possible price.

## Where do we do it?

Our manufacturing operations in Bangladesh place us at the heart of the global textile industry, known for its rigorous standards of quality and innovative textile techniques. Our proficiency spans a wide range of manufacturing techniques, enabling us to execute intricate designs such as embossed prints, 3D embroidery, and appliqué printing, to name a few. This technical versatility, combined with our robust network of suppliers, empowers us to fulfill the varied requirements of our clients' projects.

Our guiding principle, 'You design, we manufacture,' reflects our dedication to turning your visionary textile concepts into tangible realities with utmost precision and efficiency. This approach ensures we meet the high expectations set by the world's leading fashion brands, emphasizing our commitment to excellence in every project we undertake.

# How to get a quote?

## Preparing the Data?

I fully understand the importance of this step and the need to gather detailed information to provide an accurate quote. It's crucial to have a technical sheet or a visual reference of similar products to clearly understand the specifications you desire for your product.

For example, if you wish to manufacture a custom hoodie, we recommend providing us with a detailed technical sheet or a collage of photos of similar hoodies you've found on the internet or from other brands. This will allow us to better understand your specific requirements and visions for the product. Gathering information from similar garments is not about copying but about inspiration and serving as a starting point to develop your ideas and customize the design according to your unique needs. The more information and details we can obtain, the more accurate the quoting and production process will be.

*Photo 1*

I want a hoodie similar to the one in the photo.

*Photo 2*

It should have a kangaroo pocket as shown in the photo.

*Photo 3*

Metallic holes for the passage of the hood cords.

*Photo 4*

Metallic terminal for the ends of the cords.

*Photo 5*

I want a woven label sewn at the top of the kangaroo pocket.

*Photo 6*

No-touch printing on the chest as shown in the image.

# The next step

## Order form

In the event that you decide to accept our quote, we will provide you with a detailed Order Form that will include your personal or company information, as well as specific product details you wish to manufacture. Once this Order Form is signed and you provide us with the proof of the initial payment via email, we will formalize your order. We are well-acquainted with this procedure and are ready to proceed according to your instructions.

## Payments

The integral part of the budget acceptance process includes the payment of 60% of the total amount at the time you formalize the order. The remaining 40% will be paid once the documentation related to the shipment of the merchandise has been provided. In the event that the budget exceeds €10,000, the first payment will be 50%, and the second payment will also be 50%.

Payments should be made via bank transfer to the account whose details we will provide at the time you formalize your order. This process ensures security and transparency in all our financial transactions.

## Samples

"I understand that our company does not maintain samples in stock for shipment, as our focus is on custom manufacturing according to the specific requirements of each customer. This results in significant variation in samples between individual projects.

In our manufacturing process, it is standard practice to provide a production sample, allowing our clients to review and fine-tune all the details of their collection. These samples play an essential role by providing valuable tools for making corrections and ensuring that the products adhere to exact specifications. After receiving feedback, we proceed to create a second sample reflecting the proposed changes, enabling us to visualize these adjustments before commencing large-scale production.

It's crucial to note that if a customer wishes to obtain samples of some garments without formalizing a full order, this option is possible, but with the condition that the customer covers all associated costs. This is because the cost of developing and producing samples is uniform, regardless of whether it's a single garment or a thousand garments. Additionally, the customer will be responsible for the transportation costs associated with shipping the samples.

This approach is designed to ensure accuracy and compliance with quality standards in all our samples before embarking on large-scale production. If you have any further inquiries or require additional information, please do not hesitate to reach out to us. We are here to provide you with the highest level of service."

## Transportation

We offer logistics solutions tailored to the needs of each project, providing options for shipping by sea or air for the transportation of our products. For smaller-scale projects, we generally prefer the air option, characterized by its speed, with estimated delivery times ranging from 7 to 10 days, although this alternative comes at a higher cost. In contrast, for more substantial production volumes, we opt for sea transportation using containers due to its cost-effectiveness, even though it requires a longer delivery period, approximately 35 to 40 days.

It is relevant to note that while air transport offers the advantage of speed at a higher cost, sea transport presents itself as a more economical solution, albeit with longer transit times. For the shipment of samples and production advances, we invariably rely on air transportation, ensuring a fast and efficient delivery.

## Certificates

"The supervision and oversight to which our manufacturing process is subjected by government institutions play an essential role in ensuring compliance with worker and environmental protection treaties. Protecting the workforce and the natural environment is of paramount importance in forging a sustainable and secure future.

We take pride in holding certificates that support our commitment to sustainability, including those related to recycled fabrics and organic cotton. Additionally, we adopt responsible practices by using protective bags made from recycled plastic for the shipment of our products. It is important to note that, as of January 1, 2023, a tax has been implemented on all plastics entering the European Community, aimed at preventing the indiscriminate entry of these materials and promoting more sustainable practices.

This approach reflects our steadfast commitment to environmental preservation and worker well-being, values we consider fundamental in building a world with a promising future. If you would like more information about our certificates or sustainability practices, please do not hesitate to contact us. We are here to provide transparency and commitment in all our actions."

## Frequently Asked Questions

What products can you manufacture?

We can manufacture a wide range of garments, although it's important to note that we can't produce everything in-house. We collaborate with specialized partners who support us in meeting most of our clients' requirements.

Do you have catalogs?

No, as mentioned earlier, our focus is on manufacturing custom products according to each client's requirements. We understand that what works for one project may not be suitable for another.

How long does the entire manufacturing process take?

Generally, we require a lead time of 90 days from the signing of the order to the final delivery. This period includes stages of sampling and adjustments that are crucial for project development. The exact duration may vary depending on the product and quantity.

How much does production cost?

The production cost varies depending on numerous variables that need to be considered. Each production is unique, and therefore, there is no fixed price. We provide customized quotes for each project.

Do I need to provide fabric or patterns?

No, it's not necessary. We offer a comprehensive service that covers the entire process from design to final manufacturing.

Can you manufacture with my fabric?

Unfortunately, it's not feasible due to transportation costs, which often exceed the value of the fabric itself. Additionally, we offer competitive prices that make this option cost-ineffective.

I have no experience in the textile industry.

Don't worry, we provide comprehensive guidance to all our clients at every stage of the process.

What warranty do you provide?

Our general order terms include a warranty that covers any issues caused by our part.

I am not registered as a company, can I use your service?

Certainly, our service is available to anyone as long as they meet the necessary conditions. You don't need to be a registered company to access our services.

# Contact Us

Let's do it together.

We welcome you to reach out to us for any questions or inquiries you may have. Please feel free to contact us at your convenience via email at [info@theprojectextil.com](mailto:info@theprojectextil.com). We are committed to providing you with detailed information and dedicated assistance.
