

# Yibin Hongqu Thread Co., Ltd

Top 2 raw white sewing thread manufacturer in China

# About Us

20 Years history in sewing thread industry

Top 2 raw white sewing thread manufacturer in China

Automated facilities in whole process

China Integrate IT application with industrialization conference for sewing industry 2024 listed company

# Our Product

Polyester Spun Yarn/Sewing Thread

Count: 16/2 to 83/3

Color: Raw White only

Technics: Ring Spun

Cone: Dyed Cone/Plastic Cone

# 20 Years History in Sewing Thread Industry

In 2002, our company was established in Shenyang, which is in the northeast of China.

With over decade rapid developing, we moved to Pingshan, Yibin which is a small county in the southwest of China in 2017.

Why we move to Pingshan, Yibin?

One of the reason is social responsibility.

Pingshan is one of the poorest county in China 7 years ago.

To help the people in this county and increase their economy, we moved from northeast of China to here - Southeast of China.

**The distance is around 3,000KM.**

Currently, we are proud to say our efforts have helped over 700 local residents (around 1% population of this county), enabling them to work locally not from thousands miles in the developed area.

It means, they can focus on their family and next generation's education more.

Now, in 2024, Pingshan is no longer a poor county in China and it's developing very fast.

Also, we too are expanding.

We bought a new plant in Pingshan recently and it will operate in March, 2025, our capability would reach to 105,000 tons per year from currently 30,000 tons per year at that time.

More than thousand local residents will be benefited for our new factory once it is fully operated.

# Top 2 Raw White Sewing Thread Manufacturer in China

Current Company: (in 2024)

Annual Capability: 30,000 tons raw white polyester sewing thread

Plant Size: The **world biggest** single building factory in sewing industry + Top 2 raw white polyester sewing thread manufacturer in China

Company Staff: 700+ stuffs

Storage: 1,000 tons raw white polyester sewing thread, 3 months usage of staple fiber

Future Company: (in 2025)

Annual Capability: **105,000 tons** raw white polyester sewing thread  
(**China market share: 20%; World market share: 18%**)

Plant Size: The **world biggest** single building factory in sewing industry + **Top 1** raw white polyester sewing thread manufacturer **in the world**

Company Staff: 1,400+ stuffs

# Automated Facilities in Whole Process

For all of the production process, we are using automatic machines, which increased 66% thread precision and decreased 66% labor cost, what's more, it will save 5% energy per ton compared with traditional facilities that most of our competitors are using.

All of the facilities we are using top brand, especially for winding. Winding process is the most important process in producing, the machines we use are Murata from Japan which is top brand in the world.

Based on automatic facilities, our factory is actually a smart factory. Because all of the datas would be shown onto our control system including factory humidity, machine state, producing quantity, etc. **All of the factors are under control, so we can assure our quality.**

# 2024 China Integrate IT Application with Industrialization Conference for Sewing Industry listed company

2024 China Integrate IT Application with Industrialization Conference was held in July 26th, 2024 in Yibin, China. As one of the listed company, all of the related people **visited our factory** including the major leaders of China National Textile and Apparel Council, Ministry of Industry and Information Technology, Sichuan Provincial Department of Economy and Information, China Communist Party of Yibin Committee, etc.

# Our Certificate

Oeko-Tex 100

GRS

ISO 9001:2015

Every year, Oeko-Tex, GRS and ISO team will visit us to help us to check whether all of our processes are comply with their standards to ensure our products are always at high level stage.

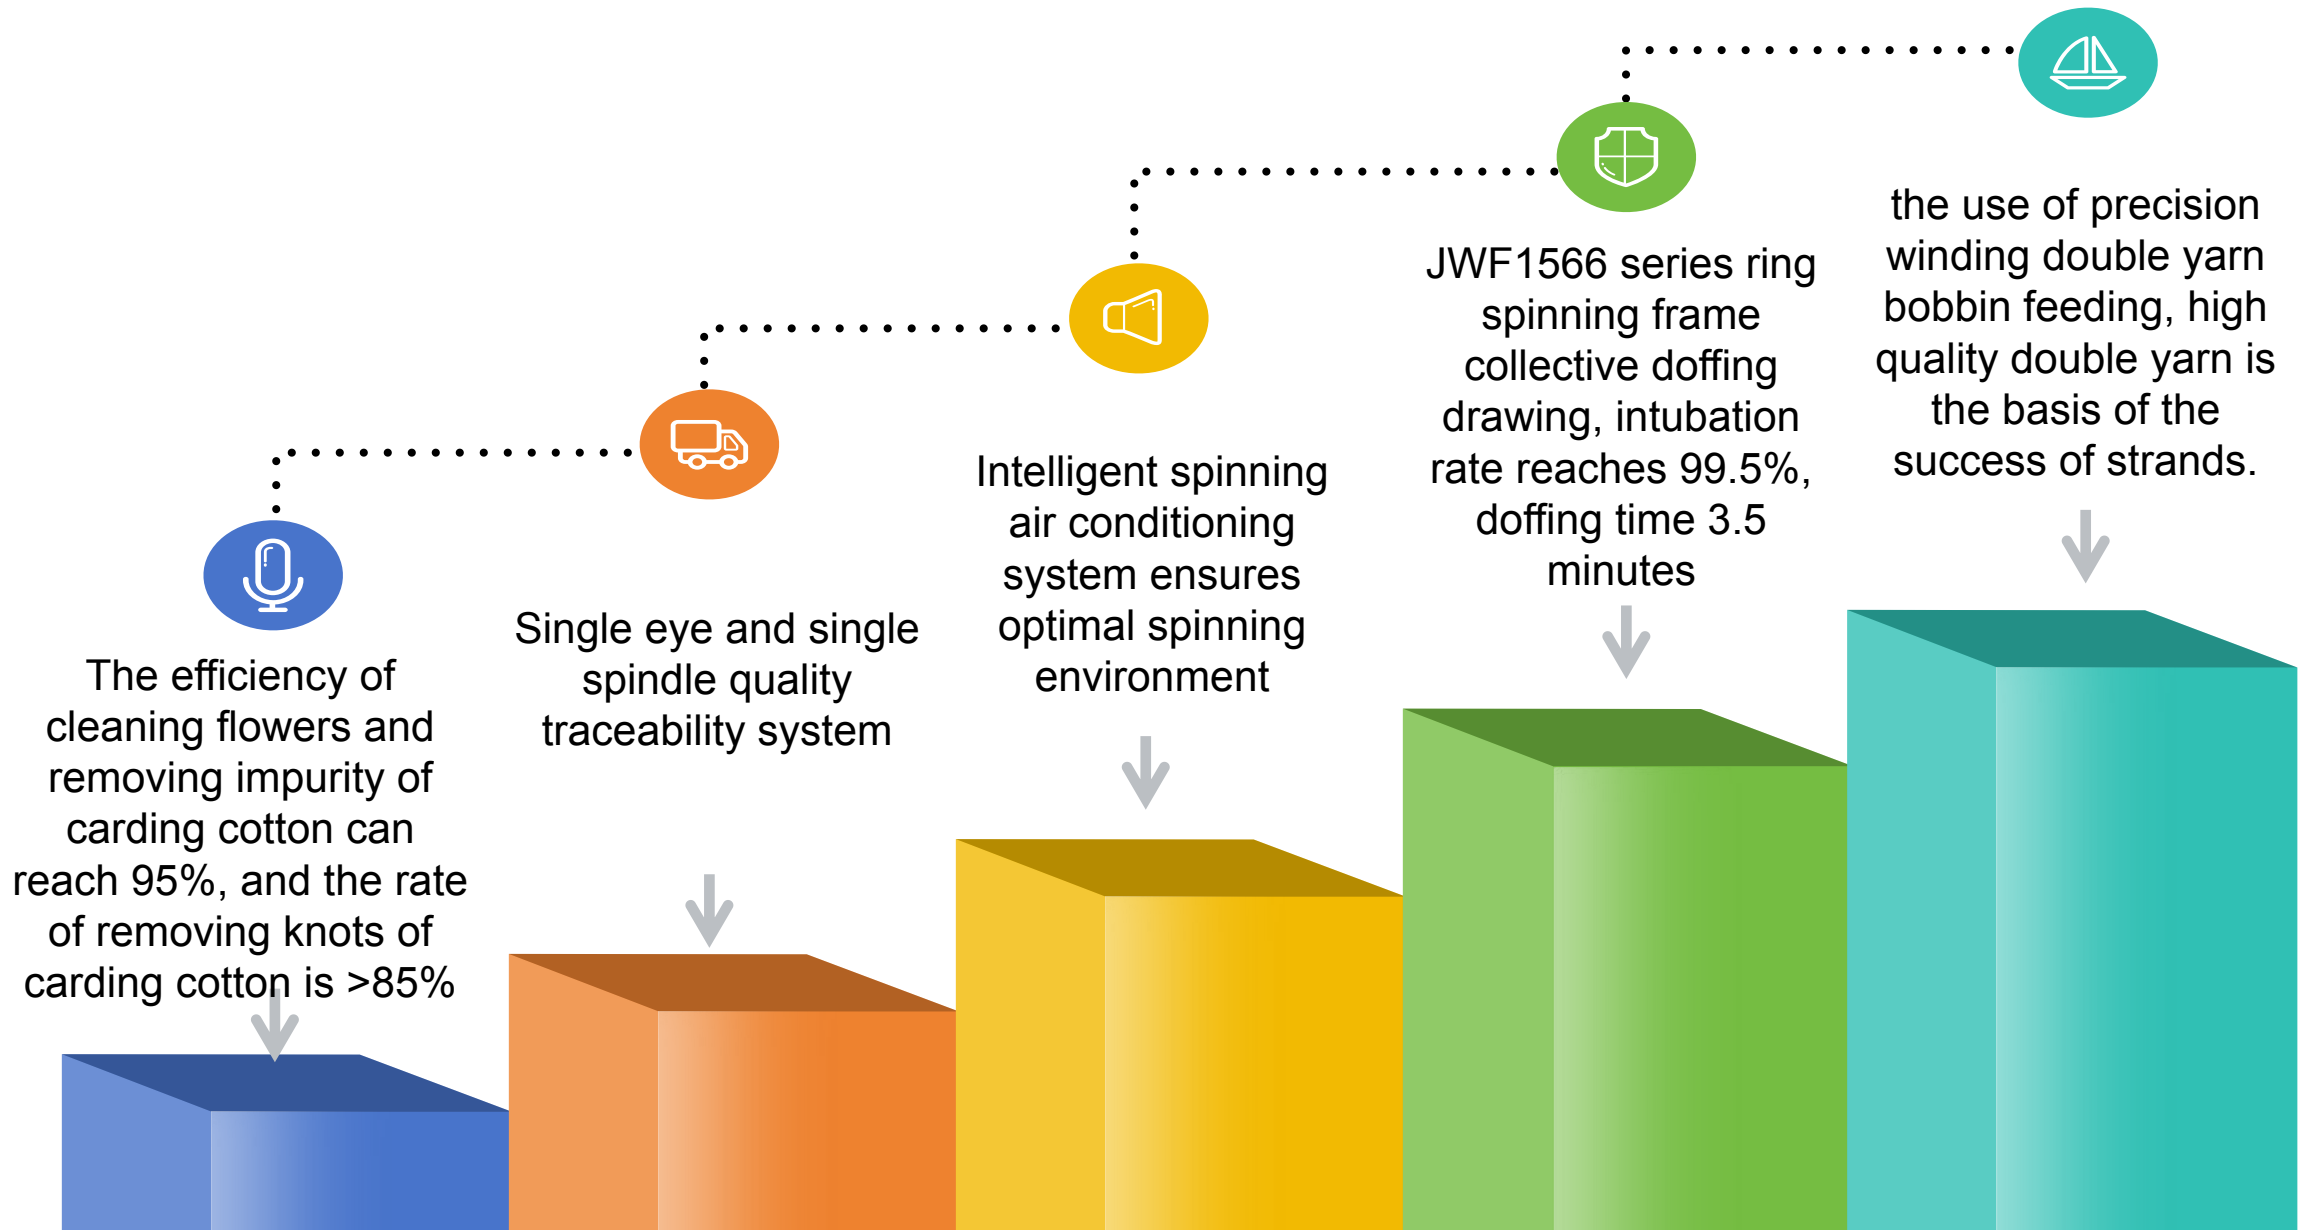

# How We Assure Our Quality

We have our laboratory to detect the thread for every process. We will detect the samples for every process first, once the sample comply with our standard, then we will move forward for mass production in this process. And once the process done, we will random detect it, once it comply with our standard, we will move forward to next process. By this way, we can guarantee all of our threads are under our standards.

# Quality advantages

# Technical advantages

## Intelligent detection and intelligent spinning equipment with single eye and single spindle

1、 Success rate of taking and releasing tubes and accuracy of automatic head generation are close to 100%

JWF1458 Automatic doffing roving frame

2、 When yarn breaking is detected, roving feeding can be stopped immediately

JWF1566-1200 Collapse spinning frame

3、 Meet the customer from 6 to the highest count of yarn spinning requirements

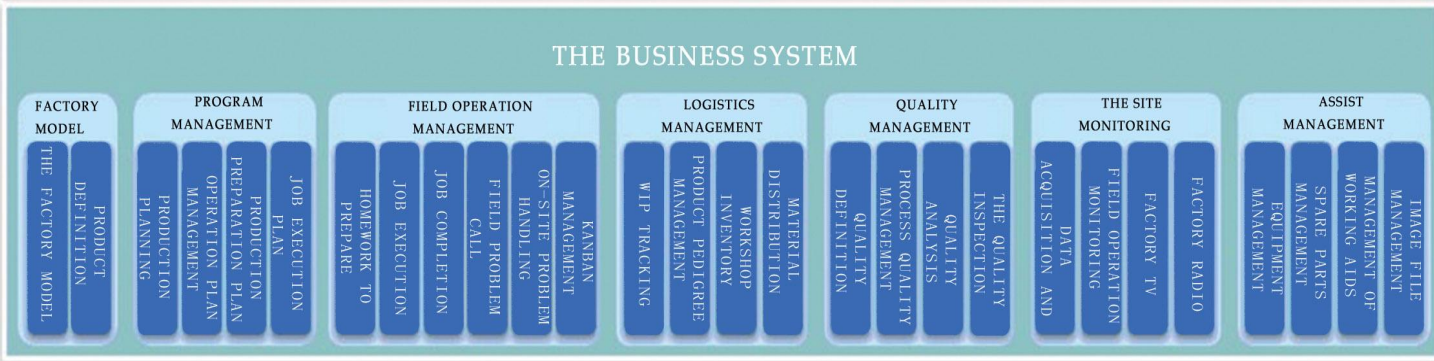

QPRO-EX Automatic Winder

# Smart factory

## ACCESS TO THE PORTAL

INTELLIGENT EQUIPMENT  
INTELLIGENT LOGISTICS

## Systematic

- Integrate domestic equipment and imported equipment and ERP system into E system to achieve a high degree of integration of online production and operation control, such as intelligent sensing, network control, online detection, quality traceability, fault diagnosis, remote operation and maintenance

# Smart factory

## ✓ Automation

Automatic cotton grabber

Smoothing drawing frame

Automatic doffing of roving

Spinning is doffing together

Longitude weft intelligent blowing suction device

Coarse and fine combined overhead transport

Single ingot detection and alarm device

Automatic tray winder

Zhejiang rifa pneumatic twister

# We Have Been Trusted Globally

Above brands are indirectly using our sewing threads, which means our customers supply threads to above brands.

Besides, our sewing threads sell to most of the sewing thread suppliers in the world, like all of the top 5 threads suppliers in Brazil, all of the top 3 threads suppliers in Bangladesh, 6 of the biggest suppliers in China.

Based on our high capability and smart factory control system, we are able to offer high quality threads with big quantity to them. **We deliver over 100 40HQ containers every month. And it could be 400 40HQ containers monthly next year.**

It means the thread level you are using is as same as above top brands in the world.
